No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

Claim 3; Page 70; 154pp; English.

Sequences AAY52510-Y52522 represent proteolytic fragments of Dermatophagoides farinae high molecular weight mite allergen protein (HWM -map) composition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. The HMW-map composition comprises mapA (a 109 kD protein) and mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines,

X និនិនិនិនិនិនិ 문 Ś Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nongroup proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the catherapeutic of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a classe. Antibodies that bind to Der HMW-map ac useful for inhibiting chinding of proteins to IgE, to prevent immunocomplex formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines capainst mite allergen hypersensitivity. Sequences ANU96314-AAU96342 Query Match Best Local S Matches 19 humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite mite allergenic protein; immunocomplex formation.                                                                          mapB (98 kD). Mice allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunites animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -map) composition. The HMW-map composition was isolated from a D. fa homogenate by gel filtration, with each fraction being analysed for presence of proteins that bound to IgE present in mite-allergic dog antisera. The HMW-map composition comprises mapA (a 109 kD protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 3; Page 69; 154pp; English.

                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein suseful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the callergic response to a mite. The DNA desensitising a host animal to an allergic response to a mite. The DNA desensitising a host animal to an detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map easeful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-536, the mature form of PDerf98-556 (AAY5523). PDerf98-536 CC has a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite component of the Dermatophagoides farinae high molecular weight mite component of the Dermatophagoides farinae high molecular weight mite component of the permatophagoides farinae high molecular weight mite consistence in partial composition was sold fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and compositions to modify an animal's hypersensitivity reaction to mite compositions to modify an animal's hypersensitivity reaction to mite callergens. Animals that may be treated include mammals and birds, ceptially felines, canines, equines, humans, other pets, and work or composition and skin test. The proteins and peptides can also be used to callergies via a skin test. The proteins and peptides can also be used to craise antibodies, which have a variety of potential uses. For example, can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to crecover desired dust mite allergens from a mixture of proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nonprotein suseful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A composition is useful for desentifying an animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)s or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention

The HWM-map composition was isolated from a D. farinae chomogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to 19E present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to read a winch have a correct fragments and uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allerges from a migrary of positive controls in test kits and as tools to recover desired dust mite
                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-490, the mature form of pDerp98-599. PDerp98-490 CC has a molecular weight of 98 kD, comprising 490 amino acide, and has a chigh degree of homology with the D. farinae mature 98 kD allergen, map8 CC (AAY52525). Nucleic acid molecules encoding PDerp98-490 were isolated from a D. pteronyssius cDNA library by hybridisation with a probe encoding the D. farinae high molecular weight map (HMM-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, cm with a probe encoding the D. farinae high molecular weight map (HMM-map) composition. CC may be used in therapeutic compositions to modify an animal's them, compositivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, cother pets, and work or domestic animals. The proteins or fragments may calso be used to diagnose allergies via a skin test. The proteins and composition pets, and also be used to raise antibodies, which have a variety of controls in test kits and as tools to recover desired dust mite allergens from a controls of the proteins and the proteins are allergens. The proteins from a control of the proteins of the passively immunise animals against dust mite hypersensitivity, as positive controls of the proteins from a control of the proteins from a protein of the protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)S or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AMU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mite allergen protein; map; high molecular weight; HYM-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; fel canine; veterinary; antibody; vaccine; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  D. pteronyssius 98 kD mite allergen protein (map)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-AUG-2003

Cc farinae 98 kD allergen, mapB (AAY5523). Nucleic acid molecules encoding CD prop8-509 were isolated from a D. pteronyssius cDNA library by CC hybridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and cc mucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals cc that may be treated include mammals and birds, especially felines, CC canines, equines, humans, other pets, and work or domestic animals. The CC proteins or fragments may also be used to diagnose allergies via a skin ctest. The proteins and peptides can also be used to raise antibodies, comich have a variety of potential uses. For example, they can be used as CC vaccines to passively immunise animals against dust mite CC proteins in the proteins and substitute controls in test kits and as tools to crecover desired dust mite allergens from a mixture of proteins. (Updated CC on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                 The invention relates to an isolated mite allergenic protein of CD Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for elliciting an immune response egainst Der HMW-map protein. The protein or a reagent comprising a non-protein acceous epitope is useful for identifying an animal (e.g., dog, cat) succeptible to or having an allergic response to a mite. An expendition is useful for desensitising a host animal to an the animal to a succeptible to a mite. The DNA and protein can be used in the CC detection of anti-Der HMW-map partial fluids, and inhibition confimmunoglobulin (19) or Der HMW-map protein activity associated with a clisease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to 19E, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 or represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to isolated protein allergens from the Blomia tropicalis mite, designated Blot 3 and Blot 12(8). The protein allergens are useful for preventing, reducing or ameliorating a B. tropicalis hypersensitivity condition, such as asthma, atopic dermatitis or rhinitis. The present sequence is a protein described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New protein allergens from the mite Blomia tropicalis, useful as vaccine for preventing, reducing or ameliorating a B. tropicalis hypersensitivity or allergic conditions, e.g. asthma, atopic dermatitis or rhinitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 35. Application US/0929225

Sequence 35. Application US/0929225

Patent No. 645866

GarbraAL INFORMATION:

APPLICANT: Huncer, Shirley Wu
APPLICANT: Huncer, Shirley Wu
APPLICANT: Weber, Eric R.

ITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
ITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES,
ITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES,
ITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: 1999-04-15

CURRENT FILING DATE: 1999-04-15

EARLIER APPLICATION NUMBER: 60/098,909

EARLIER FILING DATE: 1999-05-13

EARLIER FILING DATE: 1999-05-13

EARLIER FILING DATE: 1999-04-17

PATENT NO. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 5038
LENGTH: 259

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Accession: 10.000 feeting but the protein UL41 - human cytomegalovirus (strain AD169)

C;Species: human cytomegalovirus, human herpesvirus 5

A;Note: host Homo sapiens (man)

C;Date: 07-Sep-1990 #sequence_revision 07-Sep-1990 #text_change 28-Jul-2000

C;Accession: 509804

Nat. Struct. Biol. 6:1048-1053(1999).
-!- FUNCTION: Receptor for He cytotoxic ligand TNFSF10/TRAIL. The adptor molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. Promotes the activation of NF-

INTER-ALPHA-TRYPSIN INHIBITOR HEAVY CHAIN
                                                                                                                                                                                        SUBUNIT: 1-alpha-I plasma protease inhibitors are assembled from SUBUNIT: 1-alpha-I plasma protease inhibitors are assembled from one or two heavy chains (H1, H2 or H3) and one light chain, bikunin. Inter-alpha-inhibitor (I-alpha-I) is composed of H1, H2 and bikunin, inter-alpha-like inhibitor (I-alpha-L1) of H2 and bikunin, and pre-alpha-inhibitor (P-alpha-I) of H3 and bikunin. PTM: Heavy chains are interlinked with bikunin via a chondroitin 4-sulfate bridge to the their C-terminal aspartate (By

SUBCELLULAR LOCATION: Cytoplasmic (Potential).
SIMILARITY: IN THE N-TERMINAL SECTION; CONTAINS A DOMAIN WITH SOME SIMILARITIES WITH COBQ/BIOD.
SIMILARITY: In the C-terminal section; belongs to the phosphate acetyltransferase and butyryltransferase family.
                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              X-RAY CRYSTALLOGRAPHY (2.96 ANGSTROMS) OF 1171-1304.

UNCTION: Involved in transport factor (Ran-GTP, karyopherin)-
mediated protein import via the F-G repeat-containing domain which
acts as a docking site for substrates. Could also have isomerase
or chaperone activity and may bind RNA or DNA. Component of the
nuclear export pathway. Specific docking site for the nuclear
export factor exportin-1.
SUBUNIT: Forms a tight complex in association with RANBPI and the
                                                                                                                                                                                                                                                                                                                ubiquitin-conjugating enzyme E2 (UBC9) (By similarity).
-!- SUBCELLULAR LOCATION: Nuclear pore complex. Cytoplasmic filaments.
-!- DOMAIN: Contains F-X-F-G repeats.
-!- SIMILARITY: Contains 4 RanBDI domains.
-!- SIMILARITY: Contains 8 RANBP2-type zinc fingers.
-!- SIMILARITY: Contains 1 cyclophilin-like PPlase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RANBDI 4.

PPIASE CYCLOPHILIN-TYPE.
P -> A (in dbSNP:12770).
/FITG=VAR 014886.

Submitted (MAR-1998) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: Belongs to the amino acid permease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

-I- FTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.

-I- DISEAGE: Defects in COL6A3 are a cause of Bethlem myopathy (BM) [MIM:158810]. BM is a rare autosomal dominant proximal myopathy characterized by early childhood onset (complete penetrance by the age of 5) and joint contractures most frequently affecting the elbows and ankles.

-I- DISEASE: Defects in COL6A3 are a cause of Ullrich congenital muscular dystrophy (UCMD) [MIM:254090]; also known as Ullrich scleroatonic muscular dystrophy. UCMD is an autosomal recessive congenital myopathy characterized by muscle weakness and multiple joint contractures, generally noted at birth or early infancy. The clinical course is more severe than in Bethlem myopathy.

-I- SIMILARITY: Contains I BPTI/Kunitz inhibitor domain.

-I- SIMILARITY: Contains 12 VWFA domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. #### ALIGNMENTS

RESULT 1

Sequences AAY5510-Y52522 represent proteclytic fragments of Dermatophagoides farinae high molecular weight mite allergen protein (HWW-map) composition. The HWW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. The HWW-map composition comprises mapA (a 109 kD protein) and mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therepeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially fellnes, canines, equines, Mite allergen protein; map; high molecular weight; HWW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapA; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline; canine; veterinary; antibody; vaccine; immunisation. Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens. House dust mite allergen protein (map) A/B fragment map(3). ```
Dermatories Arithae high molecular weight mite allergen protein (HWW map) composition. The HWW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgB present in mite-allergic dog antisera. The HWW-map composition comprises mapA (a 109 kD protein) and may 108 kD kD. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, chier pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a proteins and peptides can also be used to raise antibodies, which have a passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite
humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mite allergen protein; map; high molecular weight; HMW-map; allergy; house dust mite; JgE; immunoglobulin B; allergen; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline; canine; veterinary; antibody; vaccine; immunisation.

Libermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinscenus epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the clerction of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (1g)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunoscomplex formation, thus ceducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96342 represent Der HWW-map polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein is useful for eliciting an immune response proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunosibulin (ig)s or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to Igs, to prevent immunocomplex formation, thus reducing Mypersensitivity responses to mite allergens, and as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New mite allergenic protein isolated from Dermatophagoides, designated Der HWW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

This sequence represents Dermatophagoides pteronyssius mite allergen

protein (map) PDerp98-490, the mature form of pDerp98-509. PDerp98-490

thas a molecular weight of 98 kb, comprising 490 amino acids, and has a

high degree of homology with the D. fariane mature 98 kb allergen, mapB

CC (AAY52525). Nucleic acid molecules encoding PDerp98-490 were isolated

CF from a D. pteronyssius cDNA library by hybridisation with a probe

encoding the D. fariane high molecular weight map (HMW-map) composition.

Mite allergenic proteins and peptides, and nucleic acids encoding them,

may be used in therapeutic compositions to modify an animal s

cm pub be used in therapeutic compositions to modify an animal s

include mammals and birds, especially felines, canines, equines, humans,

cother pets, and work or domestic animals. The proteins or fragments may

also be used to diagnose allergies via a variety of

poptides can also be used to raise antibodies, which have a variety of

potential uses. For example, they can be used as vaccines to passively

in test kits and as cools to recover desired dust mite allergens from a

in test kits and as tools to recover desired dust mite allergens from a

mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)

Dermatophagoides pteronyssinus.

```
Dermatophagoides, designated ber How-map protein, and its related nucleic against the Der How-map protein. The protein are against comprising an immune response protein. The protein are against comprising a non-protein are part to make a reagant comprising a non-protein composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A cherapeutic composition is useful for idensifising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) so IDer HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to Igs. to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mate allergen hypersensitivity. Sequences Adubé0314-AAU96312 represent Der HWW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-509. PDerp98-509 has a molecular weight of 98 kD, comprising 509 amino acids, and has a high degree of homology with the D. farinae 98 kD allergen, mapB (AAY5223). Nucleic acid molecules encoding PDerp98-509 were isolated from a D. pteronyssius cDMA library by homologic modification with a probe encoding the D. farinae high molecular weight map (HWW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vacines to passively immunise animals against mite they can be used as vacines to passively immunise animals against dust mite crover desired dust mite allergate animals and as tools to recover desired dust mite allergate from a mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                              The invention relates to an isolated mite allergenic protein of bermatophagoides, designated ber HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against ber HWW-map protein. The protein or a reagant comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the detection of anti-ber HWW-map antibodies in animal fluidas, and inhibition of immunoglobulin (Ig)E or ber HWW-map protein activity associated with a disease. Antibodies that bind to ber HWW-map are useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                            binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                        New mite allergenic protein isolated from Dermatophagoides, designated Der HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Dermatophagoidee, designated Der HWM-map protein, and its related nucleic acid. The Der HWM-map protein is useful for eliciting an immune response acid. The Der HWM-map protein is useful for eliciting an immune response protein protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the clatection of anti-Der HWW-map and protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibition of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as a vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96312 represent Der HWW-map printennen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mite allergen protein, map, high molecular weight, HMW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapA; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline; canine; veterinary; antibody; vaccine; immunisation.
                                                                                                                                                                                                                                                    mite allergenic protein isolated from Dermatophagoides, designated HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response orid. The Der HWW-map protein. The protein or a reagent comprising a non-protein septemble to or a reagent comprising a non-protein septemble to or identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the cletection of anti-Der HWW-map artibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting in proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. ```
comprising 555 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite allergen protein (HWW-map) composition. The HWW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonprotein susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. A map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) so Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to Igs, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU963142 represent Der HWW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New mite allergenic protein isolated from Dermatophagoides, designated
Der HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 12; Page 120-122; 161pp; English.

The invention relates to an isolated mite allergenic protein of bermatophagoides, designated ber HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonproteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map antibodies in animal fluids, and inhibition

New mite allergenic protein isolated from Dermatophagoides, designated Der HMW-map protein, useful as a vaccine for treating mite allergy.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
